

# HONGFA JP INTEGRATED DISTRIBUTION CABINET

JP Distribution Cabinet Table 1 Special Features

Special Features	<p>JP series of low-voltage integrated distribution cabinet is a new type of multi-functions integrated distribution cabinet, and designed in accordance with the power grid construction and transformation requirements, in safe, economic, reasonable and reliable design principles, it's as power distribution, controlling, protection, no power compensation, power measuring functions, it also with intelligent functions base on customers' requirement to implement power distribution monitoring, energy measuring, power distribution, electric energy distribution, no power compensation and residual current protection as well distribution parameters acquisition, etc. The cabinet also has novel and reasonable structure, and features of high protection grade, convenient installation, debugging, maintenance and repair.</p>
	<p>Conform to GB7251.1-2005G,GB/T15576-2008</p>
	<p>The rated current is under 630A, compensation capacity is greater than 120KVA, single-phase with three-phase combined compensation, protection grade up to IP44.</p>
	<p>CCC certificate, which is the ideal low-voltage devices for the current power grids transformation.</p>
