

# HONGFA MLS WITHDRAWABLE LOW VOLTAGE SWITCHGEAR

MLS Switchgear Table 1 Overview and Features

Product Overview	<p>MLS withdrawable low voltage switchgear is the world level low-voltage switchgear which improved base on ABB new type switchgear. It conforms to the standard GB7251.1-2005 " Low-voltage switchgear and control equipment " . (ide IEC60439-1:1999)</p>
	<p>This product is suitable for the application in power station, petroleum, chemical, metallurgy, textile, high-rise building and other industries, especially in the high demand of automation requirements place and area with computer interface. As three-phase AC 50(60) HZ, rated voltage 380(660) V , rated current under 6300 for distribution, motor centralized control, low-voltage switchgear and control equipment of no power compensation use.</p>
Special Features	<p>This cabinet adopts is processed by the galvanized steel or cladding aluminum steel, which is C shaped framework with E = 25 mm modular hole, the cabinet frame connection use the new technique tapping threads and ESLOK threads, which can be flexibly and easily assembled into various forms of cabinets with high strength. The surface of door and side panel, roof, back with electrostatic spraying process, coating uniformity, strong adhesion and good abrasion resistance. All of the same functional unit can exchange, once the failure occurs, it can change to the same function units, which greatly shorten the blackout time and improve the reliability of power supply.</p>
